EDUCATION

Carnegie Mellon University

Master of Information Systems Management (MISM)

August 2025 – December 2026

Pittsburgh, PA

Relevant Courses: Data-Focused Python (A), Managing Disruptive Technologies (A–), NLP (B+), Stats (A–)

Nanjing University

Bachelor of Information Management & Information Systems

September 2021 – June 2025

Nanjing, China

GPA: 4.32/5.0 | Relevant Courses: Practical ML & Deep Learning (94), Social Network Analysis (95.2), Text Data Management (93), Big Data Systems (92), Operations Research (89)

WORK EXPERIENCE

Whelix — AI Robotics Startup (Biotech)

May 2026 – Present

AI Engineer Intern

Boston, MA

- Designed and shipped a production multi-agent AI platform for a robotics startup from the ground up, built directly on the raw **Gemini SDK** (no agent framework) to retain full control over the tool-use loop — architecting a single shared runtime powering **four** specialized Slack-integrated agents, including two CEO-only specialists entrusted with live sales-pipeline and fundraising data, deployed on **Google Cloud Run**.
- Integrated the platform across **four** external systems (Slack, Notion, Confluence, Google Workspace) via **22 custom tool functions** for structured data read/write, and engineered a two-layer memory architecture — live structured-fact writes plus GCS-backed conversation logging with nightly LLM-driven reconciliation — enabling stateless webhook calls to sustain coherent multi-turn context.
- Automated **two** recurring company workflows end-to-end (meeting-notes ingestion and agenda generation) via scheduled Cloud Run triggers, and independently authored an **11-database** knowledge-architecture plan to consolidate the company's fragmented internal documentation into a single unified system of record.

BASF Polyurethane Specialties (China) Co., Ltd.

May 2024 – February 2025

Digitalization Intern, Asia-Pacific Monomers

Shanghai, China

- Identified a critical intelligence gap in BASF's MDI/TDI pricing process: marketing analysts were manually monitoring 3–4 news sources across two languages to track demand signals — an error-prone process feeding VP-level pricing decisions in a market where BASF holds significant pricing authority in China.
- Designed and deployed an **end-to-end LLM-powered (GPT-4o) market intelligence engine** that automated bilingual news monitoring, extraction, and synthesis — replacing the manual workflow entirely and delivering structured weekly and monthly insight reports directly consumed by pricing decision-makers.
- Partnered with marketing stakeholders to ensure output format matched executive reporting requirements, driving adoption from day one and eliminating the need for manual news triage across the team.
- Supported **8+ additional digitalization initiatives** across supply chain, EHS, and production — including Power BI dashboard redesigns and data pipeline automation — serving as the technical translator between business requirements and deployed solutions.

SELECTED PROJECTS & AWARDS

Thesis: Decision-Focused Uplift Modeling for AUUC Maximization

February – May 2025

- Proposed a **DFL framework** optimizing marketing ROI directly via composite loss, formulated as Integer Linear Programming (ILP) — achieving a **3%** uplift improvement over baseline methods on the Criteo causal-inference benchmark, demonstrating superior stability in individual treatment effect estimation.

CCF Big Data & Computing Intelligence Contest (1,557 participants)

October – December 2023

- Ranked Top 3 (2nd Prize)** as team leader; coordinated task allocation across team members and resolved technical trade-offs between ML and Operations Research approaches to optimize inventory decision-making.

TECHNICAL SKILLS

Analytics & AI: LLM Agent Systems (LangGraph, AutoGen), Machine Learning, Uplift Modeling, Causal Inference, NLP, Time Series Forecasting

Tools & Visualization: Python (Pandas, NumPy, Scikit-learn), SQL, Power BI, KNIME, R

Languages: English (Professional Working), Mandarin Chinese (Native), Spanish (Elementary)
